EXPERIENCE

Karestan Javan *- Front-End Developer / DevOps Engineer*

Apr 2020 - Present

- Developed a highly scalable Node.js application with clustering to act as an API gateway for our microservices, that increased performance and reliability.
- Played a key role in the development of a framework for the insurance core application using Vue.js. Led the implementation of features and enhancements.
- Implemented Continuous Integration and Continuous Deployment (CI/CD) pipelines in Azure DevOps Server to automate the build, test, and deployment of software applications.
- Designed git workflow based on company requirements and managed branches.
- Developed multiple Bash scripts for various deployment tasks, contributing to faster deployment processes.
- Wrote End-to-End tests with Cypress that helped reduce reported bugs by 50%.

Avat *- Front-End Developer*

Sep 2020 - Mar 2021

- Designed and implemented a website for a video conference platform, using React and Meteor.
- Designed and developed a web panel with React to track ad analytics. Overcame the challenge of seamlessly integrating and live-streaming TV channels on the panel.
- Delivered over 10 projects of varying scales and complexities, ensuring successful outcomes and client satisfaction.
- Developed and deployed Docker containers.
- Served as scrum master in a team of 5 members.

Kuknos Foundation *- Front-End Developer*

Nov 2019 - Sep 2020

- Developed and maintained Kuknos desktop wallet app using Electron
- Interacted with other teams to implement a C++ module in the Electron app

Sabin Tejarat Arya *- Front-End Developer*

May 2018 - Oct 2019

- Implemented graphic user interface for a CMS page builder using Angular
- Created an API management gateway using Node.js specifically designed for open banking.
- Built a website and user panel using Vuejs
- Designed reusable user interface components in React
- Developed and implemented a CRM panel for the company, enhancing customer management processes and optimizing overall efficiency.

Adad - *Front-End Developer*

Nov 2016 - Apr 2018

- Developed a new homepage as part of a company rebranding strategy that resulted in an 80% increase in customer engagement time.
- Developed and maintained a javascript package used in Android SDK to display ads.
- Enhanced SDK efficiency by deconstructing the type system, resulting in improved performance and optimized development processes.
- Worked in Agile methodology by briefing the team in Scrum calls, suggesting story tasks, and approximating efforts.
- Contributed to CI/CD by making bash scripts for GitLab runner.
- Improved the user panel for a better user experience.

Pishro Cloud Computing - *Front-End Developer*

May 2015 - Oct 2016

- Implemented graphic user interface for cloud infrastructure provider website like DigitalOcean.
- Developed cross-browser/platform HTML, CSS, and jQuery to match design specs.
- Contributed to the backend by writing authentication service with OpenStack keystone using Python.
- Wrote tests using Selenium and Python unit tests.

SKILLS
